

Automation of Laboratories

For several years Cedrex A/S has kept focus on the automation of laboratories in the biotechnological and pharmaceutical branches.

Now you too can benefit from our experience with automation in your own lab. In some instances it is very simple for our engineers and technicians to identify and remove repetitive operations which are neither ergonomical nor effective.

Cedrex A/S has its own line of products in which several solutions to frequent problems can be found. It is very common that laboratories work under similar conditions and fight the same problems within handling. It is very likely that we already have a solution for your problem.

In the field of laboratory automation Cedrex A/S offers several solutions.

1. Semiautomatic equipment and add-ons

These are usually small machines which make the work of the laborants a little easier.

2. Automatic handling machines

In addition to removing repetitive operations this is about developing machines for the automation of screening and reagent handling. It is focused on new technology, logistics and surface treatment.

3. Technical management of laboratories

Cedrex A/S is now able to make servicecontracts on the technical management and maintenance of laboratories. We think of the contract as an offer to those laboratories which are not in possession of their own technical staff, but need help when equipment fails. With a short notice the technicians of Cedrex A/S will be able to identify and repair the cause of the breakdown.
